EDUCATION

Vishwakarma Institute of Technology, Pune

Aug 2020 – Jun 2024

B.Tech in Artificial Intelligence and Data Science (CGPA: 8.98)

WORK EXPERIENCE

Deloitte, Pune

Sep 2024 – Present

Software Engineer 1 (Distributed Systems, REST APIs, React, TypeScript)

- Owned end-to-end development of core features for the **Caterpillar client's SSO self-service digital platform** as a part of **Deloitte delivery team**, supporting **100M+** global users and enabling a business ecosystem generating **\$64.8B+ annual revenue**.
- Improved frontend performance by **40%** by reducing **Largest Contentful Paint (LCP)** to **1.5–2s** through fallback layout, skeleton loaders, and prioritized resource execution.
- Reduced backend load by eliminating **60% redundant API traffic** and accelerating server responses by **35%** via intelligent cache-layer design and enhanced distributed data retrieval flows.
- Ensured correctness of **\$1B+ annual transactions** by identifying and resolving critical data integrity issues (price mismatches, index errors) through backend validation and query refactoring, achieving **100% accuracy**.

AI4Bharat (Remote)

Jan 2024 – Jun 2024

Full Stack Developer Intern (Django, REST APIs, React, TypeScript)

- Built and optimized **RESTful backend services** using **Django REST Framework**, improving API response times by **30%** and increasing request throughput by **20%** through query optimization and efficient serialization.
- Advanced the backend scalability by refining **object-oriented Django ORM architecture**, reducing redundant database access and lowering query load by **80%**.
- Accelerated frontend data availability by **40%** by implementing efficient client-side data synchronization and query lifecycle management using **TanStack Query** and **TypeScript**.

PROJECTS

BiteStream | *React.js, Redux, REST APIs, Tailwind CSS*

- Integrated **RESTful APIs** to retrieve live restaurant and menu data, reducing fetch latency by **35%** for **100+ restaurants** through optimized client-side data coordination.
- Designed a modular frontend architecture that increased data throughput by **40%** using efficient rendering pipelines and runtime execution tuning.
- Improved application responsiveness by **30%** while eliminating **50% redundant renders** through centralized global state management with **Redux**.

Image Denoising using GANs | *Python, Deep Learning, GANs*

- Upgraded image clarity by **35%** by designing backend model pipelines leveraging **StyleGAN**-based denoising techniques.
- Minimized image noise by **30%** using Mean/Median filtering and diffusion-based preprocessing pipelines.
- Enhanced generative model quality with a **40% FID reduction** and **35% Inception Score improvement** through systematic hyperparameter experimentation.

TECHNICAL SKILLS

Languages: C++, Python, Java, JavaScript

Backend: REST APIs, Django REST Framework, SpringBoot, Object-Oriented Design

Frontend: React.js, TypeScript

Databases: PostgreSQL (project exposure), SQL

Systems: Distributed Systems, Load Balancers, API Gateways, Linux (CLI), Computer Networks (HTTP, TCP/IP, DNS)

Cloud & DevOps: AWS, Docker, Git
